

Maryland Precision Spring

Introducing the Mini Reel

Introducing the Mini Reel by Maryland Precision Spring.

The Mini Reel is our innovative small profile solution for projects requiring maximum security with minimum space.

The compact design of the Mini Reel has a slim profile that provides the same security as our full-size Reel Retriever. Perfect for cell phone or fragrance displays, this unit will keep products in place, yet not deter from the display itself.

A variety of end fitting configurations and cable lengths are available to suit your needs. Mini Reel offers all of this at a price that will bring your displays to market on time and in budget.

Laser Etching Now Available

Maryland Precision Spring is also pleased to announce laser etching technology.

Laser etching provides clear marking for projects that have multiple springs or for long running projects that may need quick end-user identification.

Our high-speed lasers can etch alpha, numeric or symbols on your springs during the manufacturing process and will not influence the turnaround time.
