MW Industries, Inc. (MWI) has been developing and manufacturing materials for the energy, oil and gas markets, primarily out of our Engineered Spring Products location, since 1983. We specialize in custom designed products for the harshest down-hole and oil rig environments, including components for oilfield drilling and exploration, gas turbines, and steam turbines.

We're proud to have been the first spring manufacturer in the U.S. to be ISO certified. In addition to being the industry's largest supplier, we have set the standard for materials, design expertise, service, process development, and quality control.

We are the industry’s leading manufacturer of a wide range of precision springs, tubing and wire forms, bow/leaf springs, extension springs, torsion springs, slip springs, and unique assemblies for the oil industry. In addition to our spring expertise, we are known for our ability to work with a large stock of premium specialty materials to form custom tubing and wire forms.

When lives and the environment are at stake, you need strong technical expertise backing you up. Our design engineers are recognized experts with more than 40 years of experience working with the leading oil exploration and services companies. Regardless of your needs, our engineers are available to assist you from concept through completion. And thanks to our highly skilled workforce, we are industry-leading specialists in manufacturing difficult-to-produce parts.

Service is in our DNA at MW Industries. It's why we take the time to talk with you one-on-one, walking you through every step of our design and manufacturing process. Our experienced engineers are trained to know what to listen for and what to ask. They're also here to help you solve any design issues that may come up.

Once we have a thorough understanding of your applications, product needs, and quality assurance requirements, we're able to provide competitively priced, superior quality parts for your precise applications. Just let us know what you're trying to accomplish, and we will find just the right solution for your needs.

Much of the innovation in the energy, oil, and gas market is derived from the use of specialty materials. This is why we place unmatched emphasis on engineering and metallurgy. We have wide-ranging expertise in handling specialty metals and alloys that meet the industry’s specific performance requirements. Thanks to our large inventory of specialty raw materials, we can also bring new custom tubing, strip, and wire form products to market faster. Our materials expertise includes Inconel®, Elgiloy®, Hastelloy® C276, and MP35N® as well as more common materials such as stainless steel, titanium, beryllium copper, and brass.
MW Industries, Inc., headquartered in Rosemont, IL, is a leading provider of highly engineered springs, specialty fasteners, machined parts and other precision components to more than 23,000 customers in over 35 countries. Its 40,000+ products are sold through a combination of direct sales, catalogs and distributors to original equipment manufacturers and aftermarket customers in a number of industries, including aerospace, medical, electronics, energy, agriculture/construction, automotive replacement and military.
