Re: RoHS Compliance

Dear Valued Customer,

Complying with the RoHS specification is extremely important to Accurate Screw Machine. However, due to the large number of part numbers we currently supply to a wide variety of customers, it is virtually impossible to respond to all requests for RoHS compliance on an individual part number and/or customer basis. In many cases, the ultimate requirement for RoHS is determined by the end use of the products as well as the markets these products are sold. Please use the following information to determine if **your specific requirements** will meet the RoHS specification when supplied by Accurate Screw Machine.

Accurate Screw Machine certifies that all parts supplied are RoHS compliant with the following exceptions:

Parts that the following finishes are specified:

- **Alodine 1200**
- **Gold Iridite**
- **Tin/Lead**
- **Black Zinc**

To ensure RoHS compliance, please do not specify the finishes (Alodine 1200, Gold Iridate, Tin/Lead and Black Zinc) in **your** specifications, on **your** blueprints or as a requirement of **your** Purchase Order.

Best regards,

Scott Solomon
V.P. & General Manager
